GIT Center

Work has been started in reconstructing the building of the previous Republic Hospital with establishment of another new wing of four floors and a capacity of 150 beds, due to finish in January 2002.

When the center will move to it's new place , we hope it will be possible to expand our services , which were very limited due to shortage of space in the current building. New departments like the Laboratory , Radiology , and Reception are planned to work with a high facilities . We hope also , to start our program of liver transplantation soon.
